COLLECTING MACHINE LEARNING QUIZ DATA USING WEB SCRAPING

questios number : 88

question example : What does “AI bias” mean when used in relation to artificial intelligence?

example answers :A.The tendency of AI systems to make decisions without data,B.The unintentional discrimination in AI systems due to biased training data,C.The ability of AI systems to make decisions without human intervention,D.The ethical considerations when designing AI algorithms.

, <ol class="wp-block-list" start="16">
What does “AI ethics” mean when used in artificial intelligence?
a. The study of AI algorithms
b. The design of AI systems to be ethically
neutral
c. The ethical considerations and guidelines for AI development and use<
br/>d. The use of AI for ethical decision-making
, <ol class="wp-block-list" start="17">
Which AI method is motivated by the laws of natural selection and the su
rvival of the fittest?
a. Reinforcement Learning
b. Genetic Algorit
hms
c. Deep Learning
d. Fuzzy Logic
, <ol class="wp-block-list" start="18">
What function does an AI-based recommendation system provide?<b
r/>a. To classify images
b. To optimize supply chain management
c. To sugges
t personalized content or products to users
d. To control industrial robots
, <ol class="wp-block-list" start="19">
What do you know by “named entity recognition” in natural language proce
ssing?
a. Identifying and classifying entities in text, such as names o
f people, places, and organizations
b. Analyzing sentiment in text
c. Transl
ating text from one language to another
d. Summarizing lengthy documents
, <ol class="wp-block-list" start="20">
What is the name of machine learning where the algorithm looks for patte
rns or groupings in data even when the labels are not explicit?
a. Supe
rvised Learning
b. Unsupervised Learning
c. Reinforcement Learning
d. Se
mi-supervised Learning
, <ol class="wp-block-list" start="21">
Which of the following cannot be considered a subset of AI?<br/
>a. Machine Learning
b. Natural Language Processing (NLP)
c. Expert Systems<
br/>d. Virtual Reality (VR)
, <ol class="wp-block-list" start="22">
What do you call a computer system that is capable of activities like sp
eech recognition, visual perception, and decision-making, which generally need human
intelligence?
a. Expert System
b. Neural Network
c. Turing Mach
ine
d. Supercomputer
, <ol class="wp-block-list" start="23">
Which AI strategy maximizes a payoff in an uncertain environment when ma
king decisions?
a. Genetic Algorithms
b. Reinforcement Learning<br/
>c. Expert Systems
d. Fuzzy Logic
, <ol class="wp-block-list" start="24">
What is the most popular programming language for developing AI and mach
ine learning applications?
a. C++
b. Java
c. Python
d. Ruby

, <ol class="wp-block-list" start="25">
Which of the following is not a Python module or framework for natural l
anguage processing?
a. NLTK (Natural Language Toolkit)
b. TensorFlo
w
c. SpaCy
d. Gensim
, <ol class="wp-block-list" start="26">

What is the main advantage of using convolutional neural networks in ima ge recognition work?
a. They require less training data
b. They can process text data effectively
c. They capture spatial relationships in images<b r/>d. They are more interpretable
, <ol class="wp-block-list" start="27">
Which AI application promotes vehicle delivery routes with the use of al gorithms?
a. Natural Language Processing (NLP)
b. Robotics
c. G enetic Algorithms
d. Machine Vision
, <ol class="wp-block-list" start="28">
What does the term “overfitting” mean in AI?
a. The model p erforms well on the training data but poorly on new data
b. The model is too sim ple to capture complex patterns in the data
c. The model is biased towards a spe cific class of data
d. The model is unable to learn from data
, <ol class="wp-block-list" start="28">
What is the name of the AI system which can comprehend, interpret, and p roduce human language?
a. Natural Language Processing (NLP)
b. Mach ine Vision
c. Reinforcement Learning
d. Genetic Algorithms
, <ol class="wp-block-list" start="29">
Which of the following is an example of a task requiring supervised lear ning?
a. Image classification
b. Clustering customer data
c. Tr aining a chatbot to have a conversation
d. Reinforcement learning in a game
, <ol class="wp-block-list" start="30">
What is the name of a particular type of AI system that can carry out a variety of tasks and displays intelligence similar to that of a human?
 a. Strong AI
b. Weak AI
c. Narrow AI
d. General AI
, <ol class="wp-block-list" start="31">
What does “CNN” stand for in the field of artificial intelligence?</stro ng>
a. Convolutional Neural Network
b. Common Neural Network
c. Continuo us Neural Network
d. Complex Neural Network
, <ol class="wp-block-list" start="32">
What is the name of an AI system’s ability to become more effective when additional data is made available to it?
a. Static Learning
b. Tran sfer Learning
c. Dynamic Learning
d. Incremental Learning
, <ol class="wp-block-list" start="33">
What application of artificial intelligence makes use of algorithms to e xamine and analyse visual data, frequently for tasks like object detection or facial recognition?
a. Natural Language Processing (NLP)
b. Robotics
 c. Machine Vision
d. Genetic Algorithms
, <ol class="wp-block-list" start="34">
What is the main goal of reinforcement learning?
a. To clas sify data into categories
b. To optimize a system for maximum efficiency
c. To make predictions based on historical data
d. To learn optimal actions through trial and error
, <ol class="wp-block-list" start="35">
Which AI method uses a set of rules to describe knowledge and then uses those rules to solve problems?
a. Expert Systems
b. Neural Networks
c. Genetic Algorithms
d. Natural Language Processing (NLP)
, <ol class="wp-block-list" start="36">
What is the main drawback of applying deep learning models, like Convolu tional Neural Networks (CNNs)?
a. They require a large amount of labeled data fo r training
b. They are not suitable for image recognition tasks
c. They cannot handle sequential data
d. They are computationally inefficient
, <ol class="wp-block-list" start="37">
What type of AI method is frequently used to simulate natural selection while maximizing solutions to challenging problems?
a. Supervised Learn ing
b. Reinforcement Learning
c. Genetic Algorithms
d. Unsupervised Lear

ning
, <ol class="wp-block-list" start="38">
What is the goal of a collaborative filtering-based AI recommendation sy
stem?
a. To generate content for a website
b. To provide personaliz
ed recommendations based on user behavior and preferences
c. To classify images<
br/>d. To optimize supply chain management
, <ol class="wp-block-list" start="39">
What is the process of training a model to carry out a task by giving it
examples of appropriate behavior in AI?
a. Supervised Learning
b. U
nsupervised Learning
c. Reinforcement Learning
d. Semi-supervised Learning</
li>
, <ol class="wp-block-list" start="40">
Which AI technology employs algorithms to produce text or speech that so
unds human?
a. Machine Vision
b. Natural Language Processing (NLP)<
br/>c. Speech Recognition
d. Genetic Algorithms
, <ol class="wp-block-list" start="41">
What is the phrase used to describe a machine learning model’s capacity
to generalize from the training data to make precise predictions on additional data?

a. Overfitting
b. Bias
c. Variance
d. Generalization
, <ol class="wp-block-list" start="42">
What is the name of the AI technique where several models or experts are
combined to create predictions or decisions?
a. Reinforcement Learning<
br/>b. Transfer Learning
c. Ensemble Learning
d. Deep Learning
, <ol class="wp-block-list" start="43">
Which of the following activation functions are frequently used in artif
icial neural networks?
a. Sigmoid
b. Regression
c. Fuzzy Logic<
br/>d. Principal Component Analysis (PCA)
, <ol class="wp-block-list" start="44">
What is the main benefit of applying reinforcement learning to AI for ac
tivities like playing games?
a. It requires a large amount of labeled d
ata
b. It can handle complex sequences of actions
c. It is not suitable for
real-time tasks
d. It relies on pre-defined rules
, <ol class="wp-block-list" start="45">
What is the name of the method used in AI that enables a model to still
make predictions even when portion of the input data is missing?
a. Reg
ularization
b. Imputation
c. Feature Engineering
d. Dimensionality Reduc
tion
, <ol class="wp-block-list" start="46">
Which of the following approaches is frequently used to evaluate an AI c
lassification model’s effectiveness?
a. Mean Absolute Error (MAE)
b. R-squared (R^2)
c. Confusion Matrix
d. Root Mean Square Error (RMSE)
, <ol class="wp-block-list" start="47">
What does “backpropagation” mean in AI?
a. The process of t
raining a neural network by adjusting its weights based on errors
b. The techniq
ue used for data augmentation
c. The process of encoding categorical data
d.
The method for calculating feature importance
, <ol class="wp-block-list" start="48">
What is the name of the kind of AI model, such as a self-driving car, th
at can complete tasks without constant human intervention?
a. Strong AI

b. Weak AI
c. Narrow AI
d. General AI
, <ol class="wp-block-list" start="49">
What does “cross-validation” mean in AI?
a. The process of
validating the results of a neural network
b. The process of training a model on
multiple datasets
c. The process of splitting data into training and testing set
s
d. The technique for evaluating model performance using multiple subsets of da
ta

What does “feature engineering” mean in the context of AI?
a. The process of designing user interfaces for AI applications
b. The process of selecting and transforming input data to improve model performance
c. The process of encoding rules in expert systems
d. The process of fine-tuning hyperparameters in machine learning models
, <ol class="wp-block-list" start="77">
Which method is frequently used to decrease overfitting in machine learning models?
a. Increasing the model complexity
b. Decreasing the amount of training data
c. Regularization techniques like L1 and L2
d. Removing all features except one
, <ol class="wp-block-list" start="78">
What is the name of the capability of an AI system to comprehend and analyze visual data from the real world?
a. Natural Language Processing (NLP)
b. Machine Vision
c. Reinforcement Learning
d. Genetic Algorithms
, <ol class="wp-block-list" start="79">
What is the name for a mathematical model in AI that use a system of equations to imitate the behavior of a complicated system?
a. Artificial Neural Network (ANN)
b. Genetic Algorithm (Ga.
c. Agent-Based Model (ABM)
d. Turing Machine
, <ol class="wp-block-list" start="80">
What is the name for a certain class of AI model that has been taught to forecast a continuous numerical value?
a. Classification Model
b. Regression Model
c. Clustering Model
d. Ensemble Model
, <ol class="wp-block-list" start="82">
What is the phrase used in AI to describe a model’s capacity to make decisions based on ambiguous or insufficient data?
a. Fuzzy Logic
b. Genetic Algorithms
c. Reinforcement Learning
d. Deep Learning
, <ol class="wp-block-list" start="83">
What is the name of the neural network architecture that has input, hidden, and output layers among its interconnected layers?
a. Recurrent Neural Network (RNN)
b. Convolutional Neural Network (CNN)
c. Feedforward Neural Network
d. Radial Basis Function Network (RBFN)
, <ol class="wp-block-list" start="84">
Which AI method is frequently used to divide data into groups or categories based on their similarities?
a. Reinforcement Learning
b. Clustering
c. Regression
d. Dimensionality Reduction
, <ol class="wp-block-list" start="85">
What is the name of the method used in AI that enables a model to learn from its errors and enhance its performance over time?
a. Reinforcement Learning
b. Supervised Learning
c. Unsupervised Learning
d. Semi-supervised Learning
, <ol class="wp-block-list" start="86">
What is the main objective of an AI system that does machine translation using natural language processing (NLP)?
a. To summarize text documents
b. To convert speech to text
c. To translate text from one language to another
d. To generate human-like text
, <ol class="wp-block-list" start="87">
What is the name of a particular class of AI model that may produce new data points that are comparable to current data points?
a. Discriminative Model
b. Generative Model
c. Ensemble Model
d. Reinforcement Model
, <ol class="wp-block-list" start="88">
Which of the following unsupervised learning techniques are often used for dimensionality reduction?
a. Decision Trees
b. Naive Bayes
c. Singular Value Decomposition (SVd.
d. Random Forest

	Question	Option A	Option B	Option C	Option D
0	What does “AI bias” mean when used in relation...	A.The tendency of AI systems to make decisions...	B.The unintentional discrimination in AI syste...	C.The ability of AI systems to make decisions ...	D.The ethical considerations when designing AI...
1	Which AI technique is often used for clusterin...	A.Regression	B.Reinforcement Learning	C.Supervised Learning	D.Unsupervised Learning
2	What function does a Recurrent Neural Network ...	A.To classify images	B.To analyze text sentiment	C.To process sequences of data with memory	D.To play board games
3	The main objective of artificial intelligence?	A.To replicate human intelligence exactly	B.To develop computer programs that can think ...	C.To mimic human behavior without understanding	D.To solve complex problems using algorithms
4	What does “NLU” mean when referring to natural...	A.Natural Language Understanding	B.Neural Language Unit	C.New Linguistic Understanding	D.Neutral Language Understanding
5	What is the name of the kind of AI system that...	A.Strong AI	B.Weak AI	C.Narrow AI	D.General AI
6	What is the purpose of an AI chatbot?	A.To play video games	B.To automate routine customer service tasks	C.To generate random text	D.To translate languages
7	Which AI application involves teaching a compu...	A.Supervised Learning	B.Unsupervised Learning	C.Reinforcement Learning	D.Machine Vision
8	What does “IoT” mean in terms of artificial in...	A.Internet of Things	B.Intelligence of Technology	C.Input of Text	D.Internet of Training
9	Which of the following is not a common applica...	A.Sentiment analysis	B.Machine translation	C.Image recognition	D.Chatbots
